

Trypanosoma equiperdum IVM-t1

Raw-read evidence summarises variant calls, read counts, and paired-end support at two key residues (653 and 698) as well as the intervening interval.

Reference indicates the amino acid in the *T. brucei* reference sequence. **M653** and **L698** represent the dominant IVM-t1 alleles.

Data derived from pilot sequencing; full scan of the TAC102 locus is available.
